Efforts for Better
9.000 sqm plant,
Gebze,Kocaeli | TURKEY

Reliable Manufacturer

In our Kocaeli facility, our experienced production team working day and night to keep constant production in extrusion, steel and fibre mesh corner to aim quality like how we promise to our partners because our reliable production is our significative feature for abroad and domestic market.

Long-term Supplier

As a more than a half-century company, we aware that our commercial relationship between our clients needs to be on a win-win situation that's our first mentality since our establishment. We are showing our finest effort on service and quality to increase mutual benefits with our partners.

Products with Quality

In our type of manufacturing system, quality control is the most important hallmark to keep persistence in the production department. Our standards need to meet up with EN Standards, for instance, the thickness, wing dimension, and packaging of the profiles. We are aware that, these quality standards are made difference and directly affect our partners' businesses. We develop our quality department every day to cath these standards and serve the best to our partners.

Fast & Good Service

Our company mentality focuses on delivering the goods on time with promised quality that's the reason our supply and production chain system created to answer our partners' needs the shortest time. Fast service means happy customers and more profitable businesses for them!

PVC EXTRUSION
7.000
tons per year

CORNER BEADS WITH MESH
36.000.000
meters pear year

METAL BEADS
5.500
tons per year

WAREHOUSE
1.500
pallettes capacity

Make sure that you choose the most suitable profile material and plaster mortar according to the application area to avoid excessive risks, claims and consequential damage.

To prevent bimetallic corrosion, ensure that all metal components used in a given installation are of the same material type.

Please ensure sufficient aeration to prevent corrosion and accelerate the drying time.

Avoid damage to beads when trowelling plaster or render.

Care should also be taken to prevent mechanical damage to the galvanised coating.

The substrate must be dry, clean, dust-free and absorbent and load-bearing in accordance with the requirements of the plaster coats to be applied.

The wall surface must not contain salts or foreign substances and efflorescence must be removed.

In general, metal beads should be kept dry and stored flat.

Galvanised Beads

Manufactured with DX51D+Z galvanised steel strips with zinc coating in accordance to **EN 10346**.

Z275 Zinc coating of 275 g/m² on both sides. Meets EN 13658 parts 1&2 and EN 14353 applications.

Z100 Zinc coating of 100 g/m² on both sides. Meets EN 14353 applications.

Z60 Zinc coating of 60 g/m² on both sides. Meets no standard.

Application Areas:

- Suitable for interior applications.
- Not suitable for external applications unless secondary protection against corrosion is provided.
- Not permitted for areas exposed to high moisture and damp after application.
(houses in wooded areas, wet rooms, swimming pools and domestic bathrooms etc.)

Compatibility:

- Suitable for lime, cement, lime-cement or gypsum based plaster applications.

Installation:

- Should be fixed with plaster or render dabs. Adhesive mortars with set accelerators containing chlorides are not suitable for fixing galvanised profiles.
- Not resistant to corrosion when using top coats of less than 3mm depth in exterior areas.
- Should not come into contact with aluminium or stainless steel profiles.
- Cut with hand plate shears across the wings and a fine toothed saw across bead noses.
- Should be fixed in accordance with embedding the bead's wings into the plaster.

Galvanized Beads with PVC nose

Manufactured with DX51D+Z galvanised steel strips with zinc coating of 275 g/m² on both sides in accordance to **EN 10346** and protective **PVCu nose**. PVC nose adds protection and a maintenance free finish.

Application Areas:

- Suitable for exterior applications and in conditions with high moisture and damp.
(houses in wooded areas, bathrooms, etc.)
- Not suitable for exposed coastal locations or corrosive environments.

Compatibility:

- Suitable for lime or cement based renders, scratch renders, pasty finishing coats.

Installation:

- Should be mechanically fixed with stainless clout nails or with cement based mortar, no plaster.
- May not be plastered over. PVC nose must be cleaned off immediately after plastering.
- Take off nails eventually used for fixing of the profiles before plastering.
- Cut with hand plate shears across the wings and a fine toothed saw across bead noses.

Natural Aluminium Beads

Manufactured with natural aluminium strips in accordance to **EN 485** and **EN 573**.

Application Areas:

- Suitable for interior applications and thermal insulation systems.
- Not suitable for external applications unless made from white powder-coated aluminium which is suitable for use with mineral render systems and with epoxy, silicone or silicate render systems.

Compatibility:

- Suitable for gypsum and synthetic resin plaster applications.
- Not suitable for cement and lime-based plasters unless coated with base coating.

Installation:

- Should be fixed with plaster in the same quality as the base coat.
- Cut with hand plate shears across the wings and a fine toothed saw across bead noses. Never with a blade.

PVCu Beads

Extruded with **impact resistant, %0 recycled content** and **high quality** rigid PVC.

- Economical alternative to stainless steel for external applications.
- Superior corrosion resistance unlike galvanized beads.
- Unsharp edges prevent injuries.
- Convenient, easy to cut lengths on site.
- Light and easy to transport.
- Resistant to breakage.

Application Areas:

- Precise solution for interior areas exposed to high moisture and damp after application.
(houses in wooded areas, wet rooms, swimming pools and domestic bathrooms etc.)
- Suitable for exposed coastal locations or corrosive environments.

Compatibility:

- Suitable for external applications with appropriate cement based renders.

Installation:

- Should be fixed with plaster in interior applications.
- Should be fixed with cement based adhesive mortar dabs in exterior applications.
- Cut using a fine-toothed hacksaw across bead noses.

PVCu Beads with Mesh

Extruded with **impact resistant, %0 recycled content, high quality** rigid PVC and reinforcement alkali-resistant glass fibre mesh.

- **ETAG 004** certified 145 g/m² reinforcement alkali-resistant E-glass fibre mesh.
- High quality 145, 110, 75 g/m² reinforcement alkali-resistant glass fibre mesh.
- Strong adhesion of bead and glass fibre mesh with transparent hot-melt glue.

Application Areas:

- Suitable for ETICS, EWI and EIFS applications.

Installation:

- Should be pushed into the first base coat layer.
- Cut using a fine-toothed hacksaw across bead noses.

The most appropriate bead should be specified in accordance with the application, required plaster depth and desired finish. You may refer to the below statements regarding the explanations, headings, drawings and tables.

Application Areas

Interior plaster:	Plaster for indoor applications.
Exterior plaster:	Render for outdoor applications.
Dry Lining:	Gypsum, drywall finishing.
ETICS:	External Thermal Insulation Composite System
EIFS:	External Insulation and Facade System
EWI:	External Wall Insulation

Tolerances

Plaster depth with a tolerance of $\pm 1\text{mm}$,
Material thickness with a tolerance of $\pm 1\text{mm}$,
Wing width with a tolerance of $\pm 1\text{mm}$ in total,
Length with a tolerance of $\pm 10\text{mm}$.

European Standards

EN 13658-1:	Metal lath and beads - Definitions, requirements and test methods - Part 1: Internal plastering
EN 13658-2:	Metal lath and beads - Definitions, requirements and test methods - Part 2: External plastering
EN 14353:	Metal beads and feature profiles for use with gypsum plasterboards - Definitions, requirements and test methods

Technical Documents

If the requested profile meets the requirements of the related standard, DoP (Declaration of Performance) can be asked for. Otherwise, **TDS (Technical Data Sheet)** can only be obtained.

Plaster Depth

Refer to the minimum depth with a tolerance of $\pm 1\text{ mm}$ without fixing material. The minimum depth is to be controlled at the fixing of the profile and in case of differences to be claimed immediately. Claims after the finishing of the plaster work can not be accepted.

Surface Treatments

Expanded mesh

Flanges can be easily flexed over irregular, uneven surfaces with a significant cost advantage.

Mini mesh

Fine mesh wings to provide an excellent plastering key.

Perforated smooth surface

Holes allow gypsum to penetrate through the bead to the drywall.

Perforated embossed surface

Embossed surface increases profile stability and improves plaster embedding.

Square Hole

Large holes allow plaster or render to penetrate through the bead to the surface.

Bundle (bun)

Paper edge protector (pep)

Cardboard box (cts)

PE foil bag (fbg)

Shrink film (shf)

*All delivery terms are Ex-Works if any other agreement does not exist.

**Orders of each article will be accepted and delivered as pallets.

***Our pallet quality meets with Provisions of Regulation about Marking of Wooden Packaging Marketing, as prepared for ISPM 15 Standard. Please ask this marking permission certificate to your export representative.

Pallet for Galvanised, Aluminium and PVCu Beads
Orders should be replaced as 3 pallets or multiples of 3.

Pallet for PVC beads with mesh in cartons&steel cardboard boxes.
Orders should be replaced as 3 pallets or multiples of 3.

Pallet for PVC beads with mesh in cartons or foil bags
Orders should be replaced as 2 pallets or multiples of 2.

- IŞIK guarantees, within general business terms, the proper material quality and the careful manufacture of the profiles.
- No responsibility or liability is accepted for errors or information that is found to be misleading. Suggestions, descriptions and application advises are only for information and IŞIK accepts no liability in respect thereof.
- Because the composition and the chemical and physical properties of the plasters applied are out of our control, no guarantee can be accepted for the resistance of the profiles against corrosion. The compatibility of the plaster with the profiles must be ensured.
- Varying factors in the application of plaster make it necessary to adapt to the individual working conditions from case to case. This is the responsibility of the buyer. The term of guarantee for plaster profiles is six months, in compliance with the legal regulations on sales contracts, and begins on the date of delivery.
- Practical tests are the safest way to avoid possible mistakes, for which no guarantee can be given. Corrosion can only occur if the plasters are under permanent influence of humidity or if they dry too slowly. Make sure the plaster dries quickly by airing well.
- Storage and application instructions must always be observed and followed.
- Metal corrosion is caused by chlorides, carbon dioxide or a combination of moisture and oxygen.
This can lead to the following different types of corrosion:

Type of Corrosion	Apperance	Cause
General corrosion	Brown	Steel with no protective coating exposed to the air
Pitting corrosion	Brown/white	Effect of corrosion stimulators (e.g.chlorides) on metals, including stainless steel.
Contact corrosion	Brown/white	Contact between two different metals causing the less noble one to corrode.
White rust	White	Corrosion of aluminium.
Rust film	Orange/ brown	Incipient surface corrosion in a thin layer. Often caused by moisture during storage or use.
Crevice corrosion	Brown	Caused by crevices in the metal surface.
Interlayer corrosion	Detachment of surface layer	Corrosion in the contact and surface layer,adhesion zone between metal surface and surface layer. Caused by corrosive behaviour of surface layer.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.
