Manufacturer of Building Finishing Beads

**Efforts for Better
9.000 sqm plant,**

Gebze, Kocaeli | TÜRKİYE

Reliable Skilled Manufacturer

Crafting high-quality beads with the utmost precision and care, using only the finest materials and manufacturing techniques, just as we promise to our partners.

Loyal Partner

With over half a century of experience, we recognize the importance of the customer, mutual trust and enduring partnerships.

Good Quality & Service Provider

We embody quality in all processes and materials, strive for on-time delivery, understand customer needs, offer timely responses, and resolve complaints, all exceeding expectations.

Manufacturing

Offering a Premium Building Finishing Beads

Dry lining

In accordance to EN 14353: Metal beads and feature profiles for use with gypsum plasterboards - Definitions, requirements and test methods.

Internal plastering

In accordance to EN 13658-1: 2005 Metal lath and beads. Definitions, requirements and test methods Part 1: Internal plastering.

External rendering

In accordance to EN 13658-2: 2005 Metal lath and beads. Definitions, requirements and test methods Part 2: External rendering.

Thermal insulation systems

Designed to complement ETICS, EIFS and EWI systems.

Compliance and Quality Assurance

Lenix products are produced exclusively with materials that comply with EN standards and feature CE marking, ensuring they meet all relevant standards.

Galvanised Steel

Manufactured with DX51D+Z galvanised steel strips with zinc coating in accordance to EN 10346. Z275 Zinc coating of 275 g/m² on both sides. Meets EN 13658 parts 1&2 and EN 14353 applications. Z100 Zinc coating of 100 g/m² on both sides. Meets EN 14353 applications.

Application Areas:

- Suitable for interior applications.
- Not suitable for external applications unless secondary protection against corrosion is provided.
- Not permitted for areas exposed to high moisture and damp after application. (houses in wooded areas, wet rooms, swimming pools and domestic bathrooms etc.)

Compatibility:

- Suitable for lime, cement, lime-cement or gypsum based plaster applications.

Installation:

- Should be fixed with plaster or render dabs. Adhesive mortars with set accelerators containing chlorides are not suitable for fixing galvanised profiles.
- Not resistant to corrosion when using top coats of less than 3mm depth in exterior areas.
- Should not come into contact with aluminium or stainless steel profiles.
- Cut with hand plate shears across the wings and a fine toothed saw across bead noses.
- Should be fixed in accordance with embedding the bead's wings into the plaster.

Galvanised Steel with uPVC Nose

Manufactured with DX51D+Z galvanised steel strips with zinc coating of 275 g/m² on both sides in accordance to EN 10346 and protective uPVC nose. uPVC nose adds protection and a maintenance free finish.

Application Areas:

- Suitable for exterior applications and in conditions with high moisture and damp. (houses in wooded areas, bathrooms, etc.)
- Not suitable for exposed coastal locations or corrosive environments.

Compatibility:

- Suitable for lime or cement based renders, scratch renders, pasty finishing coats.

Installation:

- Should be mechanically fixed with stainless clout nails or with cement based mortar, no plaster.
- May not be plastered over. uPVC nose must be cleaned off immediately after plastering.
- Take off nails eventually used for fixing of the profiles before plastering.
- Cut with hand plate shears across the wings and a fine toothed saw across bead noses.

Aluminium Alloy

Manufactured with natural aluminium strips in accordance to EN 485 and EN 573.

Application Areas:

- Suitable for interior applications and thermal insulation systems.
- Not suitable for external applications unless made from white powder-coated aluminium which is suitable for use with mineral render systems and with epoxy, silicone or silicate render systems.

Compatibility:

- Suitable for gypsum and synthetic resin plaster applications.
- Not suitable for cement and lime-based plasters unless coated with base coating.

Installation:

- Should be fixed with plaster in the same quality as the base coat.
- Cut with hand plate shears across the wings and a fine toothed saw across bead noses.
- Never with a blade.

uPVC

Extruded with impact resistant, %0 recycled content and high quality rigid uPVC.

- Economical alternative to stainless steel for external applications.
- Superior corrosion resistance unlike galvanized beads.
- Unsharp edges prevent injuries.
- Convenient, easy to cut lengths on site.
- Light and easy to transport.
- Resistant to breakage.

Application Areas:

- Precise solution for interior areas exposed to high moisture and damp after application. (houses in wooded areas, wet rooms, swimming pools and domestic bathrooms etc.)
- Suitable for exposed coastal locations or corrosive environments.

Compatibility:

- Suitable for external applications with appropriate cement based renders.

Installation:

- Should be fixed with plaster in interior applications.
- Should be fixed with cement based adhesive mortar dabs in exterior applications.
- Cut using a fine-toothed hacksaw across bead noses.

uPVC with Glass Fibre Mesh

Extruded with impact resistant, %0 recycled content, high quality rigid uPVC and reinforcement alkali-resistant glass fibre mesh.

- ETAG 004 certified 145 g/m² reinforcement alkali-resistant E-glass fibre mesh.
- High quality 145, 110, 75 g/m² reinforcement alkali-resistant glass fibre mesh.
- Strong adhesion of bead and glass fibre mesh with transparent hot-melt glue.

Application Areas:

- Suitable for ETICS, EWI and EIFS applications.

Installation:

- Should be pushed into the first base coat layer.
- Cut using a fine-toothed hacksaw across bead noses.

Reliable Packaging and in-house Pallet Production

Lenix packaging are designed to protect and preserve the quality of our products during transport and storage.

Lenix pallets are made;

* We understand the importance of packaging in ensuring that our products reach our customers in perfect condition.

** Lenix packaging is a testament to our commitment to quality and attention to detail.

Q46

Angle Bead

46mm wing, 12mm plaster depth

CE
EN13658-1

- Galvanised Steel
- 2275 g/m²
- 0.50mm
- EN 13658-1

- Metal corner bead designed to provide a straight and true reinforced outside corner for internal 2-coat plaster applications.
- Expanded mesh wings form a strong bond to the substrate and allow for complete embedment of the entire bead, especially near the nose where strength is needed.
- Internal use only.

E52

Plaster Stop Bead

52mm wing, 10mm or 14mm plaster depth

CE
EN13658-1

- Galvanised Steel
- 2275 g/m²
- 0.50mm
- EN 13658-1

- Metal stop bead for 2-coat plaster applications.
- Designed to effectively terminate plaster edge and/or to separate plaster from all other materials at doors, windows and other openings; also when plaster meets dissimilar material
- Expanded mesh wing provides excellent plaster embedment at the junctions of the bead and metal lath.
- Internal use only.

**uPVC BEADS FOR
EXTERNAL & INTERNAL USE**

WR1

Window Reveal Bead

6 or 9mm plaster/render depth

EN13658-2

- uPVC ■ EN13658-2
- 3mm UV-acrylate adhesive PE foam tape
- Tear-off flap with a self-adhesive transfer foil tape

- Lenix WR1 Window Reveal Bead ensures an elastic, driving rain-proof connection between plaster/render and window/door frames in external rendering and internal plastering applications, eliminating the need of sealants. 6mm and 9mm render depth of bead options available.
- The UV-acrylate based adhesive PE foam tape offers superior driving rain resistance, high adhesive strength and optimal aging resistance, while also allowing a high level of motion absorption. It is available in 3x5.5mm for 6mm render depth and 3x8mm for 9mm render depth.
- The tear-off flap with a self-adhesive transfer foil tape ensures secure attachment of the protective cover film, protecting windows/doors during plastering/rendering work. The protective flap is removed once the work is complete, leaving a clean plaster edge.

THERMAL INSULATION BEADS

Our new investment of **Ultrasonic Welding Technology**

Ultrasonic welding technology allows the mesh to be securely welded to the profile in ETICS applications, creating thermal joints and ensuring durable, long-lasting connections.

- Mesh Drip Beads
- Mesh Window Reveal Beads
- Mesh Render Stop Beads
- Base Clip-on Profiles
- Base Edge Profiles

Lenix joined the EAE family! With this collaboration, we aim to further our commitment to sustainability and quality, working together with Europe's largest ETICS community to develop innovative solutions.

- Ultrasonic-welded ETAG 004
145g/m² glass fibre mesh

- Exterior grade uPVC drip bead with mesh to form drip edges to protect insulated render systems from water penetration in ETICS/ EIFS/EWI systems.
- Designed to be used on the undersides of window heads & balconies.
- Drip edge to direct water away from openings and along the balcony & lintel soffits to assist with moving moisture/rainwater away from the wall.
- Grooved inner-surface for a better render grip.
- Ultrasonic-welded glass fibre mesh with a 10x10cm width for improved reinforcement and crack resistance.
- Provides a 6mm render depth for both base and final coats.
- Completely encapsulated in render.

SF21

Mesh Render Stop Bead

Visible drip edge , 3 or 6mm render depth

- uPVC
- Ultrasonic-welded ETAG 004
145g/m2 glass fibre mesh

- Lenix SF21 Mesh Render Stop Bead ensures precise and straight finish in render and ETICS/EIFS/EWI systems by producing neat render edges. 3mm and 6mm render depth of bead options available.
- ETAG 004 - 145g/m2 glass fibre mesh with a 10cm width is ultrasonic-welded to the uPVC bead for improved reinforcement and crack resistance.

BE6

Base Edge Profile

6mm drip edge

CE
ETAG004

- uPVC
- Ultrasonic-welded ETAG 004
145g/m² glass fibre mesh

- Lenix BE6 Base Edge Profile is a thermal bridge-free plinth profile with a drip edge, providing a seamless transition between façade insulation and plinth insulation in ETICS/EIFS/EWI systems.
- Targeted drainage of rainwater. Precise edge formation.
- Can be shortened from 80mm to 60 or 40mm using the breaking edge. It provides a clean, precise finish for ETICS/EIFS/EWI systems.
- ETAG 004 - 145g/m² glass fibre mesh with a 10cm width is ultrasonic-welded to the uPVC bead for improved reinforcement and crack resistance.

A1

Starter Track

30x15mm, for insulation of 30 - 300mm

ETAG004

- Aluminium
- 1.0mm and 0.8mm thickness
- ETAG 004

- Aluminium base profile for starting ETICS/EIFS/EWI systems.
- Integrated drip edge to safeguard insulation from rising moisture.
- Provides targeted water drainage and flush alignment for a clean, straight and sturdy base support.
- Designed for use along the plinth area to help divert moisture/rainwater away from foundation walls.

V23F-A

Mesh Arch Bead

25mm wing, mesh width of 10x10cm

CE
ETAG004

- uPVC
- 1.0mm thickness
- 145 g/m² glass fibre mesh
- White

- uPVC corner bead with mesh reinforces and protects arch corners and curves in ETICS/EIFS/EWI systems, formed by insulation boards.
- Perforated wings on the bead ensure true corners with precise and neat edges.
- Glass fibre mesh to provide superior keying with the finishing coat and avoid cracking.

General Information

Quality and Guarantee

- **Lenix** guarantees, within general business terms, the proper material quality and the careful manufacture of the profiles.
- No responsibility or liability is accepted for errors or information that is found to be misleading. Suggestions, descriptions and application advises are only for information and **Lenix** accepts no liability in respect thereof.
- Because the composition and the chemical and physical properties of the plasters applied are out of our control, no guarantee can be accepted for the resistance of the profiles against corrosion. The compatibility of the plaster with the profiles must be ensured.
- Varying factors in the application of plaster make it necessary to adapt to the individual working conditions from case to case. This is the responsibility of the buyer. The term of guarantee for plaster profiles is six months, in compliance with the legal regulations on sales contracts, and begins on the date of delivery.
- Practical tests are the safest way to avoid possible mistakes, for which no guarantee can be given. Corrosion can only occur if the plasters are under permanent influence of humidity or if they dry too slowly. Make sure the plaster dries quickly by airing well.
- Storage and application instructions must always be observed and followed.

Type of Corrosion	Apperance	Cause
General corrosion	Brown	Steel with no protective coating exposed to the air.
Pitting corrosion	Brown/white	Effect of corrosion stimulators (e.g.chlorides) on metals, including stainless steel.
Contact corrosion	Brown/white	Contact between two different metals causing the less noble one to corrode.
White rust	White	Corrosion of aluminium.
Rust film	Orange/brown	Incipient surface corrosion in a thin layer. Often caused by moisture during storage or use.
Crevice corrosion	Brown	Caused by crevices in the metal surface.
Interlayer corrosion	Detachment of surface layer	Corrosion in the contact and surface layer,adhesion zone between metal surface and surface layer.Caused by corrosive behaviour of surface layer.
